

Summary (Notes are added to the wireframes as well):

1. Adding Author's name at the top of the descriptions
2. I think "report" and "suggest" buttons are too close to each other - specifically report is too accessible in the middle, may cause accidental clicking. my suggestion is to move "report" to the top right corner
3. Adding "+create description" button after the top 3 descriptions
4. Option to bookmark or star a topic (in the app version), for future reference; which can be categorized by the user as well. This feature can be added if we find the time and capacity, not critical for the MVP I guess

enter bio

Hand-drawn sketch of a mobile app interface for a bio page. The interface includes a navigation bar at the top with a back arrow and the word "next". Below the navigation bar is the title "create bio". Underneath the title is a large, empty rectangular box for a profile picture. Below the picture box is the text "9/2/10". At the bottom is a rounded rectangular box containing a 3x3 grid of checkboxes. The bottom-right checkbox is checked and has the word "done" written next to it.
